EDUCATION

Guru Tegh Bahadur Institute of Technology

B.Tech in Information Technology — CGPA: 8.1/10

Ambedkar Institute of Technology

Diploma in Information Technology — CGPA: 8.2/10

Rajouri Garden, Delhi

Nov 2022 – Jul 2025

Nirman Vihar, Delhi

Nov 2019 – Aug 2022

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL, HTML, CSS

Frameworks & Libraries: ReactJS, Bootstrap, Pandas, NumPy, scikit-learn

Tools & Platforms: Firebase, Git, GitHub, Postman, Power BI, Advanced Excel, WordPress

Concepts: REST APIs, CRUD Operations, Real-Time Databases, Data Cleaning, Generative AI

WORK EXPERIENCE

GlobalLogic

Associate Analyst

Gurugram, India

Aug 2025 – Present

- Check and clean large datasets to find errors, missing information, and patterns in company systems.
- Create clear reports with numbers and charts to help managers make operational plans.
- Work with different teams to make sure data reports match actual business goals.

PROJECTS

Canteen Management System | *ReactJS, Firebase, Bootstrap, Recharts* | [GitHub](#) | [Live](#)

Jul 2025

- Built a full-stack food ordering web app with real-time product listings, cart management, and order history using React and Firebase Realtime Database.
- Implemented Firebase Authentication for secure role-based access; admins can view all orders and sales trends via interactive Recharts dashboards.
- Added PDF export for order history using jsPDF; redesigned checkout flow, cutting average order completion time by 25%.

VisData — Data Visualization Tool | *ReactJS, JavaScript* | [GitHub](#) | [Live](#)

2025

- Developed a browser-based data visualization tool that parses and renders uploaded .xlsx, .xls, CSV, and JSON files into interactive charts without any server-side processing.
- Implemented local-first architecture, keeping all data in-browser to eliminate upload latency and ensure user privacy.
- Supported multiple chart types with dynamic switching, enabling non-technical users to explore datasets visually.

Text-to-Image Generator | *Python, Stable Diffusion* | [GitHub](#)

Feb 2025

- Engineered a generative AI pipeline that produces images from natural language prompts using Stable Diffusion, optimized to run on CPU and GPU environments.
- Peer-reviewed research on this system published at ICAISI-2025 international conference on AI and intelligent systems.

ChitChat — Real-Time Translation Chat App | *ReactJS, Python, Flask, Firebase, PyTorch, Transformers* | [GitHub](#) 2024

- Built a full-stack chat application with real-time multilingual translation powered by Helsinki-NLP MarianMT transformer models served via a Flask-SocketIO backend.
- Integrated Firebase for authentication and message persistence; React frontend communicates with the Python server over WebSocket for low-latency translation.
- Supports multiple target languages with an intuitive interface; containerized Python environment with pip-managed dependencies for reproducible setup.

CERTIFICATIONS & ACHIEVEMENTS

Research Publication — ICAISI-2025

Peer-reviewed paper on Text-to-Image Generation using Stable Diffusion

Smart India Hackathon

Participant in national-level government innovation challenge organized by Ministry of Education

Certifications

Data Structures & Algorithms | CodSoft Software Development Internship
