

Saurav Rawat

+91 70110 53736 | souravrawat142@gmail.com | linkedin.com/in/SauRavRwT | github.com/SauRavRwT | New Delhi, India

EDUCATION

Guru Tegh Bahadur Institute of Technology

B.Tech in Information Technology — CGPA: 8.1/10

Ambedkar Institute of Technology

Diploma in Information Technology — CGPA: 8.2/10

Rajouri Garden, Delhi

Nov 2022 – Jul 2025

Nirman Vihar, Delhi

Nov 2019 – Aug 2022

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, SQL, HTML, CSS

Frameworks & Libraries: ReactJS, Bootstrap, Pandas, NumPy, scikit-learn

Tools & Platforms: Firebase, Git, GitHub, Postman, Power BI, Advanced Excel, Prompt Engineering

Concepts: REST APIs, CRUD Operations, Real-Time Databases, Data Cleaning, Generative AI

WORK EXPERIENCE

GlobalLogic

Associate Analyst

Gurugram, India

Aug 2025 – Present

- Audit large datasets to identify errors, missing values, and anomalies across internal systems.
- Produce reports with metrics and charts that support operational planning by management.
- Coordinate with cross-functional teams to align data outputs with business requirements.

PROJECTS

DevLens — GitHub Portfolio Analyzer | *React 19, Vite, Gemini API, GitHub REST API* | [GitHub](#) | [Live](#) June 2026

- Built a client-side React dashboard that fetches public GitHub profiles via the REST API and computes a portfolio health score based on stars, forks, language weights, and recent commit activity.
- Integrated the Google Gemini 1.5 Flash API to generate career analysis reports including technical strengths, STAR-format resume bullets tied to real repository names, and recommended next skills.
- Added an automated README audit that scores documentation from A+ to F by checking structure, installation steps, code blocks, and media shields; included an offline heuristic fallback when no API key is provided.

Team Task Manager — Role-Based Project Tool | *ReactJS, Firebase Auth & Realtime DB* | [GitHub](#) | [Live](#) May 2026

- Developed a role-based task management web app where Admins create and delete projects and assign tasks, while Members update only their assigned task statuses — enforced at both UI and database rule levels.
- Resolved a stale closure bug in Firebase real-time listeners using a `useRef` pattern; fixed auth persistence on page reload by coordinating `onAuthStateChanged` with a `PrivateRoute` wrapper.
- Deployed on GitHub Pages using the 404-redirect hack; structured Firebase RTDB security rules to scope read and write access by role, preventing unauthorized cross-user data access.

Sentiment Analysis — Product Review Analyzer | *Python, Streamlit, NLTK, VADER* | [GitHub](#) May 2026

- Built a review analysis tool that accepts input via URL scraping, CSV upload, or direct text and classifies sentiment using NLTK VADER with positive and negative labeling.
- Added aspect extraction, suspicious review detection, and summary insight generation to surface patterns across large review datasets.
- Rendered interactive sentiment distribution charts and word clouds; included downloadable annotated CSV output for offline analysis.

Text-to-Image Generator | *Python, Stable Diffusion* | [GitHub](#) Feb 2025

- Built a generative image pipeline that produces images from natural language prompts using Stable Diffusion, optimized to run on both CPU and GPU environments.
- Peer-reviewed research on this system published at ICAISI-2025, an international conference on AI and intelligent systems.

CERTIFICATIONS & ACHIEVEMENTS

Research Publication — ICAISI-2025

Peer-reviewed paper on Text-to-Image Generation using Stable Diffusion

Smart India Hackathon

Participant in national-level government innovation challenge organized by Ministry of Education

Certifications

GSI NVIDIA Technologies | Data Structures & Algorithms | React Development | DRDO Internship
